Application Notes	<p>Reagent for use in catalyzed reporter deposition (CARD) signal amplification¹ protocols in a variety of immunoassays in which horseradish peroxidase catalyzes local deposition of FITC tyramide. Typically used in multiplex immunohistochemistry (IHC)², even allowing antibodies of the same species to be used³. Also useful in fluorescent in situ hybridization (FISH)⁴, including plant chromosomes, which are notorious for their repetitive regions⁵. Can also be used in more unique ways, to detect dimerization⁶, or reactive oxygen species⁷.</p>
