Application Notes	GPR84 is an orphan G protein-coupled receptor that is activated by medium-chain fatty acids and hydroxyfatty acids although these may not be its endogenous agonist. <sup>1</sup> It is highly expressed on immune cells and expression levels rise after exposure to inflammatory stimuli. <sup>2</sup> Potent synthetic agonists enhance proinflammatory signaling and macrophage effector functions. <sup>1</sup> PSB-1584 is a potent synthetic exogenous agonist at GPR84, EC <sub>50</sub> =5 nM which is selective against other free fatty acid receptors and is metabolically stable when incubated with human liver microsomes. <sup>3</sup> An important new tool for studying the physiology of GPR84. <sup>4</sup>
