| Category                   | Biochemikalien                                                                                                                                                                                                                                                 |
| Product Description        | Ethynyltrimethylsilane is used in the production of novel histone deacetylase inhibitors for the treatment of Freidreichs ataxia. It also aids in the preparation of conjugated polymers with an anthracene backbone. Synonyms: Trimethylsilylacetylene, (...) |
| Molecular Weight           | 98.22                                                                                                                                                                                                                                                          |
| Purity                     | 99% (GC)                                                                                                                                                                                                                                                       |
| Form                       | Supplied as a colorless liquid.                                                                                                                                                                                                                                |
