| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Product Description        | Substrate for N-acetylgalactosaminyltransferases. Uridine diphosphate (UDP)-GalNAc acts as a precursor in the biosynthesis of O-linked oligosaccharide. It also acts as a substrate for synthesis of chitin, a vital element of cell walls in fungi and of... |
| Molecular Weight           | 651.32                                                                                                                                                                                                                                                        |
| Purity                     | 95%                                                                                                                                                                                                                                                           |
| Form                       | White to off-white powder                                                                                                                                                                                                                                     |
