| Product Description        | 2-[(2-Chloroacetyl)amino]-3-methylbenzoic Acid Methyl Ester is an intermediate in the synthesis of Tolycaine Hydrochloride (T536625), an anesthetic drug. Molecular Formula: C <sub>11</sub> H <sub>12</sub> ClNO <sub>3</sub> Solubility: Chloroform, DCM, Ethyl Acetate Molecular Weight: 241.... |
| Molecular Weight           | 241.67                                                                                                                                                                                                                                                                                              |
| Form                       | Supplied as a White Solid                                                                                                                                                                                                                                                                           |
