| Product Description        | 3,5-Dichlorophenol is an intermediate used to prepare 3-aminopyrrolidinones as protein farnesyltransferase inhibitors. It is also used to synthesize isoxazole analogs of farnesoid X receptor (FXR) agonist GW4064. Molecular Formula: C <sub>6</sub> H <sub>4</sub> Cl <sub>2</sub> O Solubilit... |
| Molecular Weight           | 163                                                                                                                                                                                                                                                                                                  |
| Form                       | Supplied as a Off-White to Pale Beige Solid                                                                                                                                                                                                                                                          |
