| Product Description        | 3,5-Difluorophenylboronic Acid is used in the synthesis of N-thiazol-2-yl-benzamides as glucokinase (GK) activators for treatment of type 2 diabetes mellitus (T2DM). Molecular Formula: C <sub>6</sub> H <sub>5</sub> BF <sub>2</sub> O <sub>2</sub> Molecular Weight: 157.91 Storage and Stability: Store a... |
| Molecular Weight           | 157.91                                                                                                                                                                                                                                                                                                           |
