| Product Description        | 4-(2-Azidoethyl)-1,3-dihydro-2H-indol-2-one is an intermediate in the synthesis of Ropinirole (R641000) related compound. Molecular Formula: C <sub>10</sub> H <sub>10</sub> N <sub>4</sub> O Solubility: Chloroform, DCM, Ethyl Acetate, Methanol Molecular Weight: 202.21 Storage and Stability... |
| Molecular Weight           | 202.21                                                                                                                                                                                                                                                                                               |
| Form                       | Supplied as a Brown Solid                                                                                                                                                                                                                                                                            |
