| Product Description        | 6-Methoxy-2-naphthylboronic Acid, is used for the synthesis of Nabumetone (N200500), and its impurities , such as 6,6-Dimethoxy-2,2-binaphthalene (D461365). Molecular Formula: C <sub>11</sub> H <sub>11</sub> BO <sub>3</sub><br>Molecular Weight: 202.01 Storage and Stability: Store at -20C. F... |
| Molecular Weight           | 202.01                                                                                                                                                                                                                                                                                                 |
| CAS Number                 | [156641-98-4]                                                                                                                                                                                                                                                                                          |
