| Product Description        | Methyl 6-Methylpyridine-2-carboxylate is a reagent used in the synthesis of antitumor agents based upon the dihydropyrrolopyrazole compounds. Also used in the synthesis of quinazolinone TGF-beta inhibitors. Molecular Formula: C <sub>8</sub> H <sub>9</sub> NO <sub>2</sub><br>Molecular Weight... |
| Molecular Weight           | 151.06                                                                                                                                                                                                                                                                                                 |
