| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Product Description        | Regulator of G protein signaling (RGS) family members are regulatory molecules that act as GTPase activating proteins (GAPs) for G alpha subunits of heterotrimeric G proteins. RGS proteins are able to deactivate G protein subunits of the Gi alpha, Go... |
| NCBI                       | <a href="#">002914</a>                                                                                                                                                                                                                                        |
| Form                       | Supplied as a lyophilized powder.                                                                                                                                                                                                                             |
