| Category                   | Molekularbiologie                                                                                                                                                                                                                                             |
| Product Description        | Galanthus nivalis agglutinin (GNA) is a small molecular weight tetramer consisting of subunits of about 13,000D. This lectin contains little or no carbohydrate. Unlike most mannose-specific lectins, it is not a metalloprotein and does not require Ca+... |
| Molecular Weight           | 263044                                                                                                                                                                                                                                                        |
| Purity                     | Purified. Three bands at 26kD, 30kD and 44kD detected by SDS-PAGE.                                                                                                                                                                                            |
| Form                       | Supplied as a liquid in PBS, pH 7.3. 0.05% sodium azide. Labeled with Agarose.                                                                                                                                                                                |
