| Product Description        | Galanthus nivalis agglutinin (GNA) is a small molecular weight tetramer consisting of subunits of about 13,000D. This lectin contains little or no carbohydrate. Unlike most mannose-specific lectins, it is not a metalloprotein and does not require Ca+... |
| Molecular Weight           | 263044                                                                                                                                                                                                                                                        |
| Purity                     | Highly purified. Three bands at 26kD, 30kD and 44kD detected by SDS-PAGE.                                                                                                                                                                                     |
| Form                       | Supplied as a liquid in PBS, pH 7.2-7.4, 20% glycerol.. Labeled with alkaline phosphatase (AP).                                                                                                                                                               |
