| Category                   | Biochemikalien                                                                                                                                                                                                                                                |
| Product Description        | A useful reagent for the derivatization of primary amines, amino acids and small peptides. Melting Point: 128-131C Solubility: Chloroform (slightly) Ethyl Acetate (slightly) Method for Determining Identity: Proton NMR (CDCl3) Spectroscopic and Mass S... |
| Molecular Weight           | 184.18                                                                                                                                                                                                                                                        |
| Purity                     | ~99%                                                                                                                                                                                                                                                          |
| Form                       | Supplied as a yellow solid                                                                                                                                                                                                                                    |
