Application Notes

Application Notes: This Human CAMP-dependent protein kinase type I-beta regulatory subunit (PRKAR1B) ELISA Kit employs a two-site sandwich ELISA to quantitate PRKAR1B in samples. An antibody specific for PRKAR1B has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any PRKAR1B present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for PRKAR1B is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of PRKAR1B bound in the initial step. The color development is stopped and the intensity of the color is measured
