

## Biozol Brands – Validated Reagents Made in Germany

Under the brand name **dianova**, Biozol presents a selection of excellent validated antibodies for human histopathology, many of them certified for use in in vitro diagnostics. You will also find a wide range of secondary antibodies.

Our **Histoprime** product line comprises specialised, ready-to-use antibodies and a broad choice of reagents for immunohistochemistry (IHC) applications.

## Mo Bi Tec

With our brand **MoBiTec**, we offer a range of high-quality laboratory columns for the purification of proteins, antibodies & nucleic acids. These versatile mini columns can be used as spin columns as well as for gravity flow. Suitable for size exclusion or affinity chromatography.

Moreover, you will find unique vector systems for protein expression in different species. Solutions are available for food grade & high-level extracellular protein production.

## Biozol Services – Get Exactly What You Need

- **Antibody Production**  
We develop your monoclonal or polyclonal antibody according to your needs.
- **Recombinant Protein Expression**  
Your recombinant proteins are designed according to your specifications.
- **Antibody & Protein Conjugation**  
We conjugate your antibody or protein with a wide range of different tags.
- **Hybridoma Sequencing**  
We sequence your hybridoma cell line quickly and professionally.
- **Antibody & Protein Sequencing**  
No hybridoma cell line? No problem! Have your monoclonal antibody sequenced.
- **Vector Design**  
Design your vector with the award-winning VectorBuilder tool!

Service at Biozol is easy:  
Simply fill in our online service form and we will contact you with a personalised offer.

## Biozol – Your Accelerator for Life-Science Breakthroughs

For more than 30 years Biozol has empowered researchers, diagnostic laboratories and pharmaceutical innovators with a comprehensive portfolio of scientific reagents, including antibodies, recombinant proteins, ELISAs/EIAs, detection kits, biochemicals and specialized reagents for cell culture, flow cytometry, immunohistology and cytogenetics.

As part of Calibre Scientific since 2018, we combine the reach of a global supplier network with the agility of our own ISO 13485:2016-certified production, launched in 2020 to deliver highly specific, made-to-order research tools. Every interaction is guided by our Customer-Centricity credo: rapid, uncomplicated solutions backed by a scientific support team of laboratory-trained PhDs, so you spend less time troubleshooting and more time advancing discovery.

## The Biozol Advantage – Five Reasons We Stand Out

### Global Network

Partnering with 300+ trusted suppliers – including exclusive brands only available at Biozol

### Everything You Need in One Place

25+ million life science products – curated, connected, and ready to power your research

### Expertise You Can Trust

Our technical support team brings deep academic and scientific know-how to every inquiry

### Here for You

Qualified and solution-oriented customer service – fast, reliable, and with attention to detail

### Ordering Simplified

Fast, transparent, and efficient ordering – because your time belongs to your research

## Our Promise – Global Sourcing Service

Our experienced logistics team will procure any product from any company worldwide: fast, reliable, and at the best possible conditions. This offer is manufacturer-independent and not limited to our established supplier network.

## ANTIBODIES

### Comprehensive Antibody Portfolio

Explore a vast selection of primary and secondary antibodies, strictly validated and optimized for all major applications including western blot, ELISA, flow cytometry, and IHC. Our range includes *in vivo* antibodies, biosimilars, recombinant and functional antibodies, as well as antibody-drug conjugates.

Find the widest choice of conjugated antibodies across species and isotypes, ideal for translational research and drug development.

### Premium Biochemicals for Every Need

Access over 1 million biochemicals, including small molecules, lipids, detergents, and reference, analytical, impurity, and pharmaceutical standards. Our selection features bioactive molecules, inhibitors, activators, screening libraries, and nanoparticles for drug discovery and advanced applications.

We also offer pharmacopoeia-grade compounds, proteomics reagents, synthesis building blocks, and specialty chemicals for cutting-edge research.

## DIAGNOSTICS

### Certified Reagents You Can Trust

Ensure accurate detection of infectious and autoimmune diseases with our wide range of IVD-certified reagents. The portfolio includes rapid tests, PCR kits, ELISA kits, IHC-validated antibodies, flow cytometry reagents, and cytogenetic tools.

All products comply with global regulatory standards and support multiple sample types including blood, tissue, urine, and saliva, ensuring reliable diagnostic results.

## PROTEINS & PEPTIDES

### Essential for Your Research

Our broad portfolio includes recombinant and native proteins, active enzymes, kinases, antigens, and virus-like particles, sourced from leading global suppliers. Animal origin-free formats ensure consistency for sensitive applications.

We offer bioactive cytokines and growth factors for cell-based studies, as well as high-quality reagents for ELISA, western blotting, and functional assays.

## CELLS & CELL CULTURE

### Essential Tools for Cellular Research

Support your cellular studies with a complete portfolio of cell lines, primary cells, stem cells, tissues, and organoids. Our defined media, dissociation solutions, buffers, and cryopreservation reagents ensure optimal growth for mammalian, bacterial, insect, and stem cells.

We also provide downstream assay reagents for applications such as flow cytometry and cell-based functional assays.

## CHROMATOGRAPHY

### Precision Tools for Reliable Separation

Equip your lab with high-performance columns, filters, valves, micropumps, and cassettes for chromatography and filtration workflows. Our portfolio includes certified HPLC-grade components, calibration materials, and chromatography standards.

We also offer mini-columns for affinity purification and specialized light sources for detectors and spectrometry systems.

## KITS & ASSAYS

### Fast, Reliable Solutions

Streamline your workflows with kits for ELISA, CLIA, IHC staining, and western blotting - trusted for reliable performance in daily lab routines. Our selection covers nucleic acid detection, isolation, and extraction, as well as impurity testing, click chemistry, and labeling

Explore solutions for metabolism, apoptosis, proliferation, and immune monitoring, including ELISPOT, FluoroSpot, tetramer assays, and T-cell detection.

## MOLECULAR BIOLOGY

### Tools for Cutting-Edge Research

Advance your work with reagents and kits for PCR, gene editing (CRISPR), NGS, library preparation, and transcriptomics. Our portfolio includes nucleic acid detection, isolation, extraction tools, nucleic acid stains, reporter gene assays, and vectors.

Support your research by using epigenetic applications, gene regulation, transduction, transfection, and by studying exosomes and extracellular vesicles.

## LAB CHEMICALS

### Chemicals for Science & Industry

Discover over 200,000 specialty and fine chemicals tailored for industrial applications, alongside a broad range of lab chemicals to support your research. The Chemos portfolio includes raw materials for pharma, food, agro, and more, with flexible supply volumes from milligrams to 100 metric tonnes.

From repackaging and contract manufacturing to REACH services and private labeling, we deliver customized solutions tailored precisely to your needs.
